

StoneGate AI

Workflow systems for restoration operators

Partnership proposal for Coastal Restoration

RECOMMENDED PATH

Build Coastal's full operating layer, not just a call workflow.

The Partnership level gives Coastal the complete StoneGate AI operating system across all 12 workflow categories, with the first layer focused on intake, dispatch, documentation, follow-up, and referral partner tracking.

[View Partnership scope](#)

[See all 12 workflows](#)

Growth can start the first connected layer. Partnership is the stronger fit if Coastal wants the full operating system, clearer delegation, better continuity for Tom and Shawn, and a platform that can keep expanding as the company scales.

STONEGATE RECOMMENDATION

Partner

\$10,000 per month plus attributable upside. Full operating layer across all 12 categories.

12

workflow categories installed, measured, and improved over the partnership.

4

hidden leak workflows surfaced as additional recovery opportunities.

30

days to install the first operating layer, then expand from proof to system.

WHAT WE HEARD

Coastal does not just need more answered calls. Coastal needs restoration-ready context.

The current opportunity is the handoff between lead capture, urgency, dispatch, documentation, follow-up, billing context, and partner source tracking.

Calls are being captured

The answering service helps prevent missed calls, but the first message still needs more restoration-specific detail.

Handoffs need structure

Loss type, urgency, access, photos, payment path, and route should move as one clean job packet.

Documentation drives revenue

Photos, readings, scans, scope notes, and equipment placement affect both speed and payment quality.

PARTNERSHIP LEVEL OFFER

Partner turns Coastal into the flagship restoration operating system.

Instead of limiting the build to the first 3 categories, Partnership connects every major operating area that affects revenue, response, documentation, and owner leverage.

RECOMMENDED PACKAGE

Partner

\$10,000/mo + attributable upside

- Everything in Growth Engine.
- Full operating layer across all 12 workflow categories.
- Multi-channel AI across voice, SMS, and email.
- Bi-weekly strategy sessions with founders.
- Dedicated direct channel and same-day founder response.
- Reporting, workflow leak review, and next-priority roadmap.

Why Partnership is the better Coastal fit

- It supports the real business issue: delegation, consistency, and owner leverage.
- It connects intake to dispatch, dispatch to documentation, documentation to billing, and referral sources to follow-up.
- It gives Tom and Shawn a clearer operating layer for continuity, reporting, and team accountability.
- It gives StoneGate AI enough scope to find and fix the hidden revenue leaks that do not show up in a basic call-answering project.

THE 12 PARTNERSHIP WORKFLOWS

A full operating system across the business.

Each category becomes a workflow lane that can be mapped, installed, measured, and improved.

01

Sales

Lead capture, qualification, estimate follow-up, close-loop reminders, and sales activity visibility.

02

Lead Generation

Fast response to web, referral, storm, and partner leads so paid or earned demand does not cool off.

03

Operations / Dispatch

Urgency classification, routing rules, on-call handoff, and dispatch-ready job packets.

04

Service Delivery

Field checklist, photo/readings capture, equipment notes, scope support, and job file completeness.

05

Billing / AR

Payment path capture, insurance or cash flags, invoice follow-up, QuickBooks-ready handoff, and AR visibility.

06

Retention

Past client reactivation, maintenance reminders, referral prompts, and lifecycle follow-up.

07

Reviews / Reputation

Post-job review requests, unhappy-client recovery, reputation tracking, and proof capture.

08

Hiring / HR

Recruiting intake, applicant pre-screen, onboarding checklist, and team training support.

09

Compliance

Required documentation checks, restoration proof packs, job file audit, and escalation alerts.

10

Vendor / Partnership

Referral partner capture, source tracking, partner notes, and relationship follow-up.

11

Reporting / Analytics

Weekly scorecard across calls, jobs, estimates, follow-up, sources, and workflow leakage.

12

Owner-only

Owner rulebook, escalation matrix, delegation dashboard, and decision queue for Tom and

Shawn.

HIDDEN WORKFLOW LAYER

The leaks most teams do not assign an owner to.

These are not usually visible on the menu, but they often create the fastest ROI once the core operating layer is active.

HIDDEN #53

Estimate hot list / warm bench

Estimates that did not close but also did not say no. The system keeps warm opportunities visible and followed up.

Audit target: \$30K to \$60K monthly leak range

HIDDEN #54

Reschedule recovery

Canceled or rescheduled appointments do not disappear from the calendar. The system creates a recovery sequence.

Audit target: \$5K to \$15K monthly leak range

HIDDEN #55

Tech-generated upsell

When a technician sees an additional need on site, the opportunity becomes a tracked recommendation instead of a forgotten note.

Audit target: \$10K to \$25K monthly leak range

BONUS

After-hours intent capture

Voicemails, emails, and web forms received outside business hours are captured while intent is still hot.

Audit target: \$10K to \$20K monthly leak range

FIRST 30 DAYS

Install the core layer first, then expand into the full 12-workflow system.

The first month should create visible operational proof while setting up the broader Partnership roadmap.

Week 1

Map and rules

Confirm services, service area, routing rules, escalation rules, current tools, owner preferences, and source tracking fields.

Week 2

Intake to packet

Build emergency intake, urgency classification, dispatch-ready job packet, and on-call routing handoff.

Week 3

Follow-up and proof

Add estimate follow-up, documentation SOP, photo/readings requirements, and referral partner tracking.

Week 4

Scorecard and roadmap

Review real activity, launch reporting, identify hidden leaks, and prioritize the next 60 days across all 12 workflows.

DECISION FRAME

**Growth is a start.
Partnership is the
complete build.**

If Coastal wants the lowest-friction first step, Growth can still work. If Coastal wants the operating system that matches the size of the opportunity, Partnership is the stronger recommendation.

Recovery

Best for proving one workflow category, mainly emergency intake and dispatch handoff.

Growth

Best for the first connected layer across intake, dispatch, documentation, follow-up, and referral tracking.

Partner

Best for Coastal if the goal is a durable operating system across sales,

operations, service delivery, billing,
retention, reporting, and owner leverage.
